

EROS – Emergency Response Oxygen System

A Portable Rapid Response System Designed for Emergency Care

The EROS system offers an easy to use, lightweight and secure solution. This product has been designed to deal with various medical emergencies requiring multi patient oxygen therapy in any flat and uneven terrain.

An invaluable resource for any HART - Hazard Area Response Team and ERT Emergency Response Team

Features & Benefits

- Wheel brakes on both back wheels to securely hold the system in position
- The system is flexible and interchangeable and it can be used for any 300 bar integral valve with schrader outlet cylinder, therefore making it compatible with any medical gas supplier cylinders
- Lightweight – ZX integral valve cylinders 14 kg each, offering manual handling benefits
- No need to connect additional regulators which reduces the overall cost associated with regulator maintenance costs
- Simple changeover from one bank to the other, providing continuity of supply

Assured Quality & Standards

The relevant parts of the EROS system are CE marked to the Medical Device Directive (class IIA), which includes leak rate, pull test, flow capacity and the correct gas specific connections.

All probes comply with BS5682 and are manufactured from stainless steel for superior wear characteristics. Hoses are compliant with ISO 5359:2014 and are made from materials compliant with ISO EN 15001.
